EDUCATION

Dr. A.P.J. Abdul Kalam Technical University Sept 2024 – May 2028 (Expected)
Bachelor of Technology, Computer Science and Engineering **CGPA***: 8.3/10*

TECHNICAL SKILLS

- **Languages:** Python, C++, Go, Java, SQL, C, JavaScript.
- **Technologies & Tools**: Git, Docker, Linux, GitHub Actions, CI/CD, Pytest, FastAPI, PostgreSQL
- **Core Competencies:** Data Structures & Algorithms, Object-Oriented Programming, Software Design, Backend Engineering, Software Testing, Debugging, REST APIs, Web Services, Distributed Systems, Relational Databases, Complexity Analysis

EXPERIENCE

Open Source Software Contributor | Debian (*Debusine*) | *25+ Merged Contributions* *Jan 2026 – Present*

- Engineered configurable HTTP timeout handling across Linux-based **distributed worker services** (MR !2928) and external requests (MR !2728)**, improving reliability** and preventing blocking operations**.**
- Improved **backend reliability** and **data integrity** by implementing worker-token access restrictions (MR !3115), artifact validation (MR !2773), and category validation controls (MR !2944), preventing invalid artifact states.
- Enhanced **system observability** and developer experience by surfacing workflow orchestration progress (MR !2667), exposing aborting-user visibility while avoiding **N+1 queries** (MR !2678), improving CLI discoverability with backward compatibility (MR !2689), and clarifying architecture-specific workflow metadata (MR !2635).
- Developed and tested unit-level changes, debugged issues through maintainer feedback and code reviews, and shipped **production-ready** improvements while preventing regressions.

Open Source Contributor | Jenkins (*jenkins.io*) | *17+ Merged Pull Requests* *Jan 2026 – May 2026*

- Improved developer documentation for plugin development, **automated testing,** and infrastructure (PR #9076, #8792, #8848, #9078), strengthening developer workflows and contributor onboarding.
- Enhanced engineering workflows through **Java 21 migration** guidance (PR #8788), **Maven workflows** (PR #8803), IDE configuration (PR #8977, #8780), and Remote Access API documentation (PR #8763), improving developer productivity.

PROJECTS

Careers-Engine | *Python, GitHub Actions, Discord.py, Pydantic, httpx, Pytest* *Live* | *GitHub*

- Architected a **modular backend automation platform** with **six decoupled services** for ingestion, normalization, filtering, persistence, and publishing, enabling reliable scheduled workflows for **400+** community members.
- Designed, implemented, tested, and deployed **backend pipelines** with stateful persistence, duplicate-free synchronization, supporting reliable data processing across independent services.
- Built CI/CD automation with **2 scheduled GitHub Actions workflows** and implemented **10+ tests** using Pytest, alongside static analysis with Ruff and MyPy checks, supporting **8** production automation runs per day.

EnerFabric | Intent-Driven Orchestration Platform for DERs | *FastAPI, PostgreSQL, MQTT, WebSockets* *GitHub*

- Built a **modular backend platform** for real-time DER orchestration, ingesting telemetry and intents over MQTT and exposing coordination decisions through REST APIs and WebSockets.
- Designed the backend with FastAPI and PostgreSQL, implementing persistence for assets, telemetry, intents, policies, and coordination runs, with **deterministic constraint and priority-based coordination**.
- Containerized and deployed the full stack using Docker Compose, integrating the backend, database, MQTT broker, simulator, and Next.js dashboard into a working end-to-end system.

ACHIEVEMENTS

- **National 2nd Runner-Up**, **IIT Bombay** E-Summit i-HACK (*RepoInsight AI*)
- Solved **535+ DSA problems** across major coding platforms (**LeetCode Max Rating**: 1553, HackerRank **5-Star in C++**)
- Founder, ZenYukti: Built and led a **1,300+ member** technical community.
- **Consolation Prize Trophy,** SRCAS Hackathon 3.0 - National-level competition with **1,050+ participating teams**.
